MEMORANDUM

DATE: February 1, 2016

TO: Campus Community

FROM: Tim Ridley, CSP, ARM-P
Director, Safety and Risk Management

SUBJECT: Asbestos Notification 2016

California Health and Safety Code, §25915 (Asbestos Notification) requires the owner of any building constructed prior to 1979 to notify employees in writing of the existence of asbestos in those buildings.

California State University, Bakersfield (CSUB) has an Asbestos Management Plan that provides procedures for asbestos work and employee protection. This plan complies with requirements of the California Code of Regulations (CCR) Title 8, §1529 Construction Safety Order and §5208 General Industry Safety Orders.

Campus-wide asbestos surveys have been conducted, and provide comprehensive information on the location and types of asbestos materials located within our facilities. This information is compiled in a database which is available in the Office of Safety and Risk Management. Asbestos containing building materials are present in many CSUB buildings. As buildings are renovated, or maintenance and repair procedures are completed, these materials are removed.

CSUB is committed to safe handling and effective management of asbestos. The University employs one Certified Building Inspector/Management Planner (B/I/MP) in Safety and Risk Management and three licensed asbestos Contractor/Supervisors (C/S) in Facilities Management. Our licensed professionals can conduct building material surveys, coordinate and supervise asbestos construction activities, perform air monitoring, provide training, and remove limited amounts of asbestos containing materials (ACM).

Asbestos is most hazardous when it is friable. The term "friable" means that the asbestos is easily crumbled by hand pressure, potentially releasing fibers into the air. Asbestos-containing ceiling tiles, floor tiles/mastic,
undamaged laboratory cabinet tops, roofing, fire doors, exterior stucco, etc. will not readily release asbestos fibers unless they are disturbed or damaged in some way.

If you are uncertain as to whether or not a material contains asbestos, you must assume it does. Never drill, hammer, cut, saw, break, damage, move, or disturb any ACM or suspect material.

The attached list identifies general locations where ACM may be encountered within your building; the complete database is available in the Office of Safety and Risk Management.

Should you have any specific questions related to this information, or you would like to read or have a copy of the complete Asbestos Management Plan, please contact the office of Safety and Risk Management at (661) 654-6320 or Tim Ridley at (661) 654-2066.
### CSUB Asbestos Survey Summary (1/2015)

<table>

Asbestos containing construction materials are not present in the following buildings.*

- Modular West
- Modular East I, II, and III
- Engineering Modulars
- P.E. Modular A, and B
- Testing Center / EOC
- University Police Department
- Facilities - Main Office
- Facilities - Shipping and Receiving
- Facilities - Welding Shop
- Facilities – Warehouse
- Business Development Center Offices
- Business Development Center Classroom Building II
- Extended University
- New Student Dorms
- Visual Arts Center
- Dezember Leadership Center
- Office of the President
- Student Union and Runner Bookstore
- Student Recreation Center
- California Well Core Repository
- Science III
- Antonio Sports Center
- Amphitheater
- Administrative Computing Services
- Greenhouse I and II
- Peet’s Coffee House
- Hardt Field
- Facility for Animal Care and Treatment
- Antelope Valley Facility
- Satellite Central Plant

* Date of construction, type of construction, abatement of materials, or knowledge of materials used in construction indicates the absence of asbestos containing materials.
