Program Description

Modern chemistry occupies a central position among the sciences. The goal of chemical science is to discover the fundamental regularities by which matter in its multitude of aggregations interacts with energy in its many forms. Mathematical models and physical principles are utilized in the interpretation of chemical concepts. The organization of chemical knowledge leads to an understanding of natural phenomena in the real world of earth and life sciences.

The departmental academic program is designed to provide essential preparation for students to pursue professional careers and/or advanced studies in chemistry or related disciplines, such as Agricultural Chemistry, Biochemistry, Clinical Chemistry, Environmental Chemistry, and Forensics Chemistry. The department offers course work for chemistry majors to meet the requirements of medical and other professional schools in the health sciences, including dentistry, pharmacy, and veterinary medicine. It also cooperates with other departments and the School of Education in developing a balanced program of academic and professional preparation for chemistry majors who seek teaching credentials. A detailed description of all student learning goals and objectives can be found at http://www.csub.edu/chemistry/assessment.

The Department of Chemistry is on the approved list of the American Chemical Society. A program leading to the chemistry major can be designed to meet the standards prescribed for the certificate of the American Chemical Society by its Committee on Professional Training.

Requirement for the Major in Chemistry

The Bachelor of Science degree in Chemistry requires thirteen courses in chemistry, including the following (or the equivalent):

1. CHEM 211, 212, 213, 331, 332, 350, 351, 352, 390, 400, 450 and 490.
2. Five additional units of upper division course work with pre-approval of academic advisor.
3. Cognate areas:
   a. MATH 201, 202, 203 or MATH 211, 212, 203
   b. PHYS 201, 202, 203 or PHYS 221, 222, 223

Requirement for the Major in Chemistry with a Concentration in Biochemistry

1. The following courses in chemistry (or the equivalent): CHEM 211, 212, 213, 331, 332, 333, 340, 355, 390, 440, and 490.
2. Two courses selected from BIOL 201, 202 or 203.
3. 13 additional units of upper division course work in chemistry and/or biology selected with pre-approval of academic advisor.
4. Cognate areas:
   a. MATH 201, 202 or MATH 211, 212
   b. PHYS 201, 202, 203 or PHYS 221, 222, 223

Requirement for the Major in Chemistry Certified by the American Chemical Society

1. The following courses in chemistry (or the equivalent): CHEM 211, 212, 213, 331, 332, 333, 340, 350, 351, 352, 390, 400, 450 and 490.
2. Five additional units of upper division course work selected with pre-approval of academic advisor.
3. Cognate areas:
   a. MATH 201, 202, 203
   b. PHYS 201, 202, 203 or PHYS 221, 222, 223

Requirements for the Minor in Chemistry

Although no minor is required for the BS degree, a minor in chemistry is available, consisting of 20 units, 10 of which must be in upper division courses.

Teaching Credential: Science Teacher Preparation Program Leading to a Degree in Natural Sciences, Primary Concentration in Chemistry

The California Commission on Teacher Credentialing (CCTC) has authorized CSUB to offer a single subject matter preparation program in Natural Sciences leading to a Bachelor of Arts degree. This course work satisfies the subject matter requirements for a "Secondary Teaching Credential in Science." The program consists of three components: I. Primary Concentration (major); II. Secondary Concentration (minor); and III. Breadth (cognates). Program completion leads to a BA degree in Natural Sciences with a major in the area of primary concentration and a minor in the secondary concentration. Additional information may be obtained from the Chemistry Department office (661-654-3027).

For a detailed description of the course requirements, please turn to the Natural Sciences section in this catalog.

Academic Regulations

A grade of "C-" in chemistry as well as cognate courses is the minimal grade acceptable for progression into subsequent chemistry courses. Students who fail to achieve at least a "C-" or above may repeat the course. If a course is satisfactorily completed, the prior unsatisfactory grade will no longer bar a student from continuing in the Chemistry program although it will still be counted in computing the overall grade point average.

COURSE DESCRIPTIONS

Lower Division

CHEM 100A Chemistry in Your Life (5)
A general education course introducing basic concepts of chemistry to the non-science major. The course focuses on the impact of chemistry on daily activities including environmental and other societal concerns. Two lectures, one discussion and one laboratory. Not acceptable for the major.

CHEM 100B CSI: Crime Scene Investigation Chemistry (5)
A general education course introducing basic concepts of chemistry to the non-science major using examples from forensic science. The course focuses on the use of crime-scene case studies, Sherlock Homes stories, and true accounts of drug deals, murders, and thefts to introduce chemical principles. Two lectures, one discussion and one laboratory. Not acceptable for the major.

CHEM 100C Chemistry and the Environment (5)
A general education course introducing basic concepts of chemistry to the non-science major using examples from environmental studies. The course focuses on the use of global warming studies, ozone hole studies, and accounts of the environmental impact of chemistry to introduce chemical principles. Two lectures, one discussion and one laboratory. Not acceptable for the major.
CHEM 100D  Chemistry of Beer and Wine (5)
A general education course introducing basic concepts of chemistry to the non-science major using examples from the beer and wine industries. The course focuses on the use of the processes of beer brewing and wine making to introduce chemical principles. Two lectures, one discussion and one laboratory. Not acceptable for the major.

CHEM 101 Preparation for College Chemistry (4)
A one-quarter course based on a systematic, semi-empirical approach to the submicroscopic world of chemistry. The development of modern ideas concerning atomic and molecular structure, principles of compound formation, and chemical reactivity will be emphasized. Emphasis will be on the development of the skills necessary for success in chemistry. Science majors should consult with their advisors before enrolling in this course. Three lectures, one discussion.

CHEM 150 General, Organic, and Biochemistry I (5)
Basic principles of chemistry including the composition of matter, periodic properties, chemical bonding and solution equilibria are introduced using examples from biological systems. Prerequisite: CHEM 101 or a satisfactory score on the Chemistry Placement Test. Recommended corequisite: CHEM 151. Two lectures, one discussion and two laboratories. Not acceptable to the major.

CHEM 151 Problem Solving in General, Organic, and Biochemistry I (1–2)
Problems out of CHEM 150 are discussed and solved. Must be taken concurrently with CHEM 150. One or two discussions.

CHEM 203 General, Organic and Biochemistry II (5)
Descriptive chemistry of carbon compounds including structure, reactivity and mechanism. Major focus is on organic compounds of biological and physiological importance as well as metabolism. Prerequisite: CHEM 150 or equivalent within the past five years. Two lectures, one discussion and two laboratories. Not acceptable to the major.

CHEM 211 Principles of General Chemistry I (5)
Introduction to atomic structure, quantum theory, periodic properties, chemical reactions, stoichiometry, gas laws and theories, molecular structure and bonding, states of matter, solutions, acids and bases, chemical equilibrium, thermodynamics, oxidation-reduction, electro-chemistry, chemical kinetics, nuclear chemistry, organic chemistry, descriptive chemistry, and coordination chemistry. Prerequisites: Math 85 or equivalent and a satisfactory score on the Chemistry Placement Test or CHEM 101. Two lectures, one discussion and two laboratories. (CHEM 211 + 212 + 213 = CAN CHEM SEQ A)

CHEM 212 Principles of General Chemistry II (5)
A continuation of CHEM 211. Prerequisite: CHEM 211 or equivalent. Two lectures, one discussion and two laboratories (CHEM 211 + 212 + 213 = CAN CHEM SEQ A)

CHEM 213 Principles of General Chemistry III (5)
A continuation of CHEM 212. Prerequisite: CHEM 212 or equivalent. Two lectures, one discussion and two laboratories (CHEM 211 + 212 + 213 = CAN CHEM SEQ A)

CHEM 277 Special Topics in Chemistry (1–5)
Topics and prerequisites to be announced. May be repeated for different topics.

CHEM 281 Problem Solving in Chemistry (1–2)
A workshop in which students work on problems related to their chemistry coursework with help from a facilitator. This workshop is designed to accompany specific chemistry courses which
must be taken concurrently. Consult the electronic course description for the acceptable companion course(s).

**Upper Division**

**CHEM 310 Concepts of Geochemistry (5)**
Distribution of elements within the earth, their mobilities and interactions during crustal processes. Methods of investigation, application to geologic and environmental studies and petroleum and minerals exploration. Field and laboratory investigations and presentations. Same as GEOL 310. Prerequisites: CHEM 213, GEOL 303 or CHEM 351 and some geology course work. (Recommended: MATH 202) A field trip may be required. Consult the Course Schedule for specific details.

**CHEM 331 Concepts of Organic Chemistry I (5)**
A detailed study of the structure and reactivity of organic compounds. Prerequisite: CHEM 213 or equivalent. Two lectures, one discussion and two laboratories.

**CHEM 332 Concepts of Organic Chemistry II (5)**
A continuation of CHEM 331. Prerequisite: CHEM 331 or equivalent. Two lectures, one discussion and two laboratories.

**CHEM 333 Concepts of Organic Chemistry III (5)**
A continuation of CHEM 332. Prerequisite: CHEM 332 or equivalent. Two lectures, one discussion and two laboratories.

**CHEM 340 Concepts of Biochemistry (5)**
Biochemical equilibria and thermodynamics, biologically important chemical compounds, metabolism of carbohydrates, fats and proteins. Prerequisite: CHEM 332 or equivalent. Two lectures, one discussion and two laboratories.

**CHEM 350 Quantitative Analytical Chemistry (5)**
The practice and theory of chemical laboratory methods including techniques of gravimetric, volumetric, spectrophotometric analysis and separation, and introductory instrumental analysis with a focus on precision and accuracy of experimental data. Prerequisite: CHEM 213 or equivalent. Two lectures, one discussion and two laboratories.

**CHEM 351 Concepts of Physical Chemistry I (6)**
Introduction to topics such as chemical thermodynamics, elementary statistical thermodynamics, properties of solutions, transport properties, phase equilibria and electrochemistry. Prerequisites: MATH 202, PHYS 201 and CHEM 213 or consent of instructor. Three lectures, one discussion and two laboratories.

**CHEM 352 Concepts of Physical Chemistry II (6)**
Introduction to topics such as chemical kinetics, quantum chemistry, atomic and molecular spectroscopy. Prerequisites: MATH 203, PHYS 202 and CHEM 351 or consent of instructor. Three lectures, one discussion and two laboratories.

**CHEM 355 Concepts of Biophysical Chemistry (6)**
Introduction to topics such as chemical thermodynamics, properties of solutions, phase equilibria, chemical kinetics, quantum chemistry, and electrochemistry with examples drawn from biochemistry. Prerequisites: MATH 212, PHYS 201 and CHEM 213 or consent of instructor. Three lectures, one discussion and two laboratories.

**CHEM 390 Seminar in Chemical Literature (3)**
Seminar in the use of modern chemical literature and literature data bases. Must be completed before enrolling in CHEM 490. Pre-requisite: senior standing.
CHEM 400 Advanced Inorganic Chemistry (5)
An analysis of the major theories of chemical bonding with particular emphasis on transition metal complexes. Structure, physiochemical properties and reactivity of classical metal complexes and organometallic compounds; mechanisms of inorganic reactions in aqueous and nonaqueous media. Pre-requisite: CHEM 332 or consent of instructor. Two lectures, one discussion and two laboratories.

CHEM 440 Advanced Biochemistry (5)
Principles underlying interactions of biological systems on the cellular, subcellular and molecular levels; membrane transport models, protein structure, function and kinetics. Prerequisites: CHEM 340 and CHEM 353 or consent of instructor. Two lectures, one discussion and two laboratories.

CHEM 450 Instrumental Analysis (5)
Principles and techniques of modern instrumental analysis including spectrophotometry, chromatography, nuclear magnetic resonance, and potentiometry. Pre-requisite: CHEM 332 and CHEM 350 or consent of instructor. Two lectures, one discussion and two laboratories.

CHEM 477 Special Topics in Chemistry (1-5)
Topics and prerequisites to be announced. May be repeated for different topics.

CHEM 480 Honors Research (5)
Individual study on a current research problem with faculty supervision, preparation of a paper. Course may be repeated twice with permission of the instructor. Normally a maximum of five units may be used for major department credit. Units in excess of five may be used for upper division elective credit. Prerequisite: Invitation by faculty.

CHEM 489 Experiential Prior Learning (1-5)
Evaluation and assessment of learning which has occurred as a result of prior off-campus experience relevant to the curriculum of the department. Course may be repeated twice with permission of the instructor. Normally a maximum of five units may be used for major department credit. Units in excess of five may be used for upper division elective credit. Available by petition only, on a credit, no-credit basis. Not open to postgraduate students. Interested students should contact the department office.

CHEM 490 Senior Seminar (3)
Presentation of papers and discussion on either a topic or a group of related topics by faculty and students. Prerequisite: Major or minor in chemistry and CHEM 390.

CHEM 495 Instruction in Chemistry (1–5)
Experience supporting teaching activities in the laboratory and/or guiding problem solving sessions. Interested students should speak with the department chair in advance to coordinate. Normally, a maximum of six units may be used for major department credit.

CHEM 496 Internship in Chemistry (1-5)
Students are assigned to various industries, institutions, or agencies and work under joint supervision of supervisors and the course instructor. Participation in staff and internship conferences. Assigned readings and projects where appropriate. (Arrangements should be made one quarter in advance with the department.) Course may be repeated twice with permission of instructor and department chair. Normally a maximum of six units may be used for major department credit. Units in excess of five may be used for upper division elective credit. Offered on a credit, no-credit basis only.

CHEM 497 Cooperative Education (1-5)
The Cooperative Education Program offers a sponsored learning experience in a work setting, integrated with a field analysis seminar. The field experience is contracted by the Cooperative Education Office on an individual basis, subject to approval by the department. The field experience, including the seminar and reading assignments, is supervised by the cooperative education coordinator and the faculty liaison (or course instructor) working with the field supervisor. Students are expected to enroll in the course for at least two quarters. The determination of course credits, evaluation, and grading are the responsibility of the departmental faculty. Offered on a credit, no-credit basis only. Department will determine application of credit.

The Department of Chemistry also offers the following science courses:

**SCI 112 Introduction to Chemistry (4)**
An introduction to basic chemical principles. Topics include: the periodic table of the elements, forms of matter and energy, molecular structure, chemical and physical properties. Three hours lecture and three hours laboratory. Prerequisite: SCI 111. Open only to majors in Liberal Studies or Child, Adolescent and Family Studies.

**SCI 354 The Nature of Science and Technology in a Modern Society (5)**
The nature of science and technology will be explored with emphases placed on the structure of knowledge, and its use in society; the relationship of science and technology to a modern society will be considered in terms of approaches to problems, decision-making skills and effects on the quality of life. Prerequisites: Successful completion of General Education Areas A and B. Satisfies general education upper division Theme 1 requirement.
